

Grain Market Report

GMR 434 – 1 July 2013

HIGHLIGHTS

Prospects for bumper crops in 2013/14 have weighed on grains and oilseeds prices over the last month, although tightening old crop supplies have provided some support to spot export quotations and near-term futures. The **IGC Grains and Oilseeds Index (GOI)** fell by 2% m/m, as a 7% decline for wheat and a 3% fall for rice were more than offset by small increases in maize and soyabean.

Total grains (wheat and coarse grains, excluding rice) output is set to rise by 8% y/y in 2013/14, and end-season stocks are expected to increase by 11%, just exceeding 2011/12 levels.

The forecast for world 2013/14 **wheat** production has been raised slightly this month, by 1m t to 683m, but the 4% y/y increase is still expected to be largely absorbed by demand. End-year stocks are forecast up by just 2m t y/y.

Projected **maize** output for 2013/14 has also been raised by 1m t since the last GMR, on higher expected output in the Black Sea region. Despite strong demand growth, stocks are likely to rise sharply, by an estimated 25% to a 13-year high.

This month's report includes tentative 2013/14 projections for rice and oilseeds. World **rice** production is expected to expand slightly, to 476m t, underpinned by increases in Asia. Aggregate end-season stocks are set to rise for the ninth consecutive year, led by 8% growth in major exporters' inventories to a fresh record, mainly reflecting expectations for further increases in Thailand. At around 44m t they would again exceed annual traded volumes.

Global **soyabean** production is expected to rise to a new record of 284m t in 2013/14, up 6% y/y on bumper crops in leading producers. Aggregate end-season inventories are consequently set to increase by 28% y/y to a three-year high, while global trade could expand by as much as 8% on larger deliveries to Far East Asia, predominately China.

In contrast, the **rapeseed/canola** market is likely to remain extremely tight in 2013/14, with world carryovers seen declining marginally, including a fall in key exporters.

IGC GRAINS & OILSEEDS INDEX (GOI)

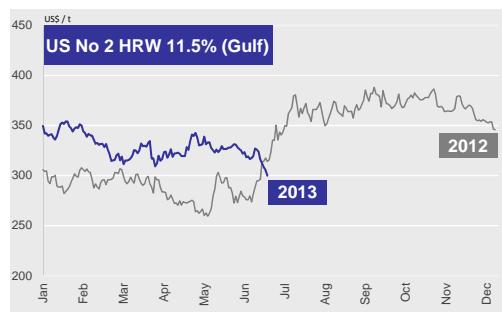

See: http://www.igc.int/grainsupdate/igc_goi.xlsb

SUMMARY OUTLOOK FOR KEY GRAINS AND OILSEEDS

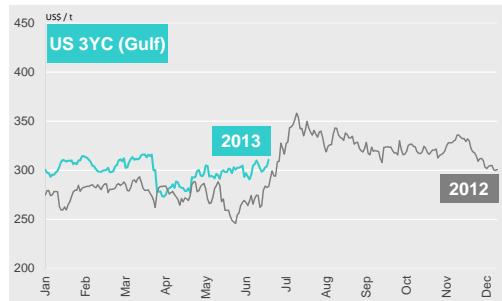

WHEAT

- The IGC GOI wheat sub-Index fell by 7% m/m on prospects for a large world wheat harvest, and a large maize harvest that could potentially limit feed demand for wheat in some countries.
- The forecast for world wheat production in 2013/14 is lifted by 1m t this month, to 683m, up 4% y/y.
- Higher than previously forecast feed and industrial use boosts world consumption and only a modest 2m t rise in end 2013/14 carryover stocks is expected.
- World trade is forecast to show little y/y change, at 137.7m t; since last month, import forecasts for China and Iran are raised, while India's projected exports are cut.

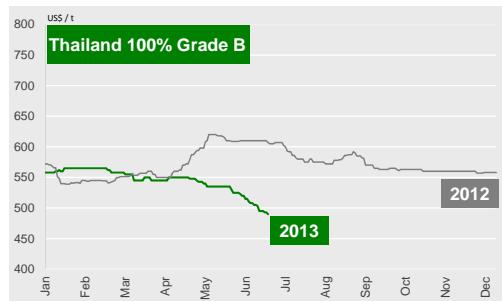

MAIZE

- The IGC GOI maize sub-Index is up 3% m/m, underpinned by tight spot availabilities, but new crop futures were pressured lower by the prospect of a sharp increase in supplies.
- Maize production is expected to rise by 11% y/y in 2013/14, to 946m t; the forecast is raised by 1m this month on higher projected output in the Black Sea region.
- Year-end stocks are projected to rise quite sharply, by 25% to 149m t, a 13-year high.
- Larger harvests in some countries will restrict gains in 2013/14 trade, but China is expected to be a much larger buyer.

RICE

- The IGC GOI rice sub-Index fell by 3% m/m to a 17-month low, led by declines in Thailand.
- The world 2012/13 carryover is expected to be broadly unchanged y/y, but is seen at a record of 41m t for the major exporters, exceeding global trade.
- Global 2013/14 output is tentatively projected to expand slightly to 476m t, with end-season stocks increasing for the ninth consecutive year, including an 8% rise in the major exporters.
- World trade is projected to increase marginally in calendar 2014, including larger deliveries to markets in Near East Asia and Africa.

OILSEEDS

- The IGC GOI soyabean sub-Index rose by 1% m/m as gains in the US, on tight old crop availabilities, and Brazil, more than offset declines in Argentina.
- World output in 2013/14 is tentatively projected to expand by 6% y/y to 284m t, led by the major producers.
- 2013/14 world carryovers are tentatively expected to increase by 28% y/y to a three-year high, with much of the rise in the major exporters, while trade is expected to rise by 8%.
- The global rapeseed/canola market is set to remain extremely tight in 2013/14 with a further marginal fall in end-season stocks, following a forecast 22% decline in 2012/13.

* IGC estimates. May differ from official estimates shown elsewhere in this report.

** Years shown for southern hemisphere countries include following marketing years for maize and sorghum. For example, for Argentina, the "2013/14" year includes the 2013/14 (Dec/Nov) local marketing year for wheat and the 2014/15 (Mar/Feb) marketing year for maize.

a) Including seed and waste.

b) Argentina, Australia, Canada, EU, Kazakhstan, Russia, Ukraine, United States

c) Includes trade in malt.

d) Including estimated trade in secondary products

e) IGC July/June trade: excluding trade in secondary products

f) Includes residual.

g) IGC July/June trade

i) EU-28 from 2013/14 onwards, EU-27 until 2012/13

Totals may not sum due to rounding.

Figures in brackets represent the previous estimate.
